

Hotel 'Saint Constantine'

It is a example of installation in accommodated space and concretely in undergrounds of the hotel unit. In the photographs that follow appears the installation in the space underneath the central point of hotel unit. It can also be seen the manhole of entry in the installation from the space of swimming-pool. The installation is found precisely next to the visitors but the degree of harmful effect is inconsequential.

The project includes septic tank, 6 units AX-100., Electric panel with telemetry and compost filter.

Owner	Mr. Pagonakis
Capacity	300 beds
Flow	90 m³/d
System	6 AX – 100
Results	BOD5 & S.S. 5-10 ppm
